Trends in the Production and Consumption of Major Forest Products in the United States

David B. McKeever
Cherilyn A. Hatfield
This report presents statistical information in tables and graphs on past trends in the production, consumption, and foreign trade of forest products in the United States. It follows the flow of wood through the U.S. economy from the Nation's forests, through the primary and secondary wood-processing industries, to the final end uses.

Keywords: Timber products output, timber commodities, foreign trade, wood products production, wood products consumption, end-use demand.

The Forest Service has printed a companion publication which contains the charts from this publication, printed in a larger format for use with opaque projectors or in preparing transparencies for overhead projectors. If you need visual aids to present information on the trends in the production and consumption of major forest products in the United States, you may request the companion publication:

The address for ordering the companion publication is as follows:

Information Office
Forest Products Laboratory
P.O. Box 5130
Madison, WI 53705

Supplies of all Laboratory publications are limited.

A limited number of free copies of this publication are available to the public from the Forest Products Laboratory, P.O. Box 5130, Madison, WI 53705. Laboratory publications are sent to over 1,000 libraries in the United States and elsewhere.

The Laboratory is maintained in cooperation with the University of Wisconsin.
On page 11, a data entry error for U.S. Timber Commodities, Lumber, for 1980 produced graphs showing a major decrease in production and consumption of lumber that year. Corrected figures 19 through 24, printed on the back of this sheet, show the actual decrease based on the proper data.

Standard Industrial Classification (S/C) System
Definitions of Industries included in Figures 71-91
and Tables 36-40 (table A-1)
Trends in the Production and Consumption of Major Forest Products in the United States

David B. McKeever, Research Forester
Cherilyn A. Hatfield, Statistical Assistant
Forest Products Laboratory, Madison, Wis.

Introduction

This bulletin presents statistical information on trends in the production, consumption, and foreign trade of major forest products in the United States. It follows the flow of wood through the U.S. economy, from the Nation’s forests, through the primary and secondary wood-processing industries, to the final end uses.

The terms used in this bulletin are defined in a glossary following the Introduction.

All data are presented in both tables and figures, which are each grouped in four parts:

1. Timber products output (figs. 1-18, tables 1-10)
2. Timber commodities (figs. 19-48, tables 11-28)
3. Foreign trade (figs. 49-57, tables 29-33)
4. End-use demand for timber (figs. 58-124, tables 34-60).

The Standard Industrial Classification (SIC) definitions of industries are presented in the Appendix.

Data for this report were obtained from a variety of published sources, including U.S. Department of Agriculture Forest Service research reports, U.S. Department of Commerce industry reports, and trade association reports. An extensive bibliography is included for individuals interested in obtaining more detailed or specific information.

Glossary

The definitions included in this glossary are from the American Society for Testing and Materials’ publication “Standard Definitions of Terms Relating to Wood-Base Fiber and Particle Panel Materials.”(6)

Bleached pulp. — A chemical pulp altered by an oxidizing or reducing agent to a G.E. brightness over 75.

Board foot. — A piece of lumber measuring 1 inch thick, 12 inches wide, and 12 inches long, or its equivalent.

Capacity. — The quantity of output that could be produced during a stated time period under normal conditions with full use of equipment and an adequate supply of raw materials and labor.

Chemical paper grade pulp. — Includes white pulp and unbleached sulphate pulp.

Chemical pulp. — Includes chemical paper grade, dissolving, and special alpha pulps.

Chemimechanical pulp. — A pulp produced primarily through mechanical fiberization. Mild chemical treatments are employed to improve the quality of the pulp. The pulp produced is usually coarse fibered.

Commercial buildings. — Buildings primarily for the rental of office space, to house banks and other financial institutions, or for use in wholesale, retail, and service trades such as stores, restaurants, and garages.

Consumption. — The amount of a product used in its final form during a stated time period, usually 1 year. Consumption is defined to be production plus imports minus exports. Also referred to as apparent consumption.

1Italized numbers in parentheses refer to literature cited at end of report.
Cord. — A pile of stacked wood measuring 128 cubic feet. The standard dimensions are 4 by 4 by 8 feet.

Defibrated/exploded pulp. — Pulps prepared by subjecting chips to high-pressure steam treatment followed by quick release of pressure, causing fibers to separate. Used to make hardboard and roofing felt.

Dissolving and special alpha pulps (sulfite and sulfate). — Highly refined, bleached, white sulfite or sulfate pulps with a high content of alpha (pure cellulose) fiber used to make photographic base papers, overlay papers, resin saturating papers, and cellulose derivatives, such as rayon, cellulose acetate, and cellulose nitrate.

Educational buildings. — Buildings used for administration and teaching of formal academic or technical courses, such as offered by colleges and universities, elementary and secondary schools, libraries, museums, and art galleries, as well as laboratories not part of manufacturing establishments.

End-use demand. — The types and quantities of timber commodities consumed in final end uses such as residential construction, furniture manufacturing, etc.

Fuelwood (roundwood basis). — All fuelwood cut directly from trees or parts of trees, including that cut from dead and cull timber as well as from growing stock.

Groundwood pulp. — A pulp produced from debarked, cleaned short logs that are pressed sideways against a revolving natural or artificial pulpstone, thereby reducing them to a fibrous mass of short fibers, which discolors in time on exposure to light and air. The wood is almost always from softwoods, although in certain pulp, hardwoods are used. Freedom from pitch is desirable. Groundwood pulp is used in papers where permanence and strength are of minor importance, but where absorbency, bulk, opacity, and compressibility are the chief characteristics desired.

Hardboard. — A generic term for a panel manufactured primarily from interfelted lignocellulosic fibers (usually wood), consolidated under heat and pressure in a hot press to density of 31 lb/ft³ (specific gravity 0.50) or greater, and to which other materials may have been added during manufacture to improve certain properties. (From the American Society for Testing and Materials.)

Hardwoods. — Dicotyledonous trees, usually broad leaved and deciduous.

Hospital buildings. — Buildings primarily used for providing hospital and institutional care, such as general, mental, and tuberculosis hospitals, clinics or infirmaries, sanitariums, nursing homes, homes for the aged, and orphanages.

Industrial buildings. — Buildings of manufacturing establishments, as defined in major groups 19-39 of the Standard Industrial Classification Manual, used to house production, assembly, and warehousing activities, as well as auxiliary facilities such as administration buildings.

Industry. — A group of establishments primarily engaged in the same or similar lines of manufacturing and having a high degree of specialization within the industry.

Insulation board. — A generic term for a homogeneous panel made from lignocellulosic fibers (usually wood or cane) characterized by an integral bond produced by interfelting of the fibers, to which other materials may have been added during manufacture to improve certain properties, but which has not been consolidated under heat and pressure as a separate stage in manufacture, said board having a density of less than 31 lb/ft³ (specific gravity 0.50) but having a density of more than 10 lb/ft³ (specific gravity 0.16).

Manufacturing industries. — Manufacturing industries comprise all establishments primarily engaged in manufacturing as defined in the 1972 revision of the Standard Industrial Classification (SIC) Manual. The SIC Manual defines manufacturing as the mechanical or chemical transformation of substances into products. The assembly of component parts or products is also considered to be manufacturing if the result is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and handling equipment.

Medium-density fiberboard (MDF). — A panel product manufactured from lignocellulosic fibers combined with a synthetic resin or other suitable binder. The panels are manufactured by the application of heat and pressure by a process in which the interfiber bond is substantially created by the added binder.

Miscellaneous industrial. — Includes cooperage, piling, poles, round products mine timbers, round and split posts, and others.

Mobile home. — A structure transportable in one or more sections, which exceeds either 8 body feet in width or 32 body feet in length, built on a permanent chassis and designed to be used as a dwelling with or without a permanent foundation when connected to the required utilities, and includes the plumbing, heating, air-conditioning, and electrical systems contained therein.

National Forest System. — Federal lands designated by Executive Order or statute as National Forests or purchase units, and other lands under the administration of the Forest Service including experimental areas and Bankhead-Jones Title III lands.

Nonhousekeeping buildings. — Buildings providing residential facilities other than housing units, generally characterized as hotels (other than apartment hotels), motels, and dormitories.

Other buildings. — Buildings except farm and public utilities, not elsewhere classified, such as auditoriums, theaters, indoor swimming pools, fire stations, and bus and air passenger terminals.
Paper grade pulp. – Includes chemical paper grade, semichemical, and mechanical pulp.

Particleboard. – A generic term used to describe panel products made from discrete particles of wood or other lignocellulosic material. Other materials can be added during the production process to improve the board. Thermosetting resins are added to the particles to serve as a binder. The particles are bound into a solid board when the particles and resins are placed under heat and pressure.

Plant byproducts. – Wood material from primary manufacturing plants (such as slabs, edgings, trimmings, miscuts, sawdust shavings, veneer cores and clippings, and pulp screenings) that are used for some products.

Primary wood-processing plants. – Plants (industries) using roundwood products (industries) such as sawlogs, pulpwood bolts, veneer logs, etc.

Product. – The end item from materials processed by manufacturing establishments. The final product of a manufacturing establishment may be “finished” in the sense that it is ready for utilization or consumption, or it may be “semifinished” to become a raw material for an establishment engaged in further manufacturing.

Pulwood. – The wood used in the manufacture of woodpulp. Includes roundwood and residues.

Region. – The three major producing regions are:

Religious buildings. – Buildings used primarily for religious services and functions or to house and train religious personnel—churches, synagogues, convents, monasteries, theological seminaries, etc., as well as funeral parlors, mausoleums, and crematories.

Residues. – Coarse: Plant residues suitable for chipping, such as slabs, edgings, and ends. Fine: Plant residues not suitable for chipping, such as sawdust, shavings, and veneer clippings. Logging: The unused portions of sawtimber and poletimber trees cut or killed by logging. Plant: Wood materials from primary manufacturing plants that are not used for any product. Urban: Wood materials from urban areas, such as newspapers, lumber and plywood from building demolition, and used packaging and shipping materials.

Roundwood equivalent. – The volume of logs or other round products required to produce the lumber, plywood, woodpulp, paper, or other similar products.

Sawlog. – A log meeting minimum standards of diameter, length, and defect, including logs at least 8 feet long, sound and straight, and with a minimum diameter inside bark for softwoods of 6 inches (8 in. for hardwoods) or other combinations of size and defect specified by regional standards.

Secondary wood-processing. – Plants using primary manufactured products plants (industries) (timber commodities) such as lumber, woodpulp, veneer, or plywood.

Semiautomated pulp. – Pulp in which only a part of the lignin of the wood is removed during cooking. High yields are obtained in this process. The term “semmichemical” indicates a relatively mild degree of cooking, such as a quick-cook sulfite or sulfate cook, and is not specific to any of the chemical pulping processes. After cooking, the softened chips are mechanically disintegrated by a suitable refiner. This type of pulp is chiefly used in the unbleached state, and is characterized by a relatively low color (dependent upon the wood used) and yields a sheet of paper or board that has a dense formation and a high degree of stiffness and rigidity.

Soda pulp. – The term used for the pulp in which the active cooking agent is caustic soda, the digestion taking place at fairly high temperatures. Soda pulp is made principally from hardwoods, such as aspen, birch, maple, gum, and tulip poplar. When bleached, it reaches a fairly white color. In general, it possesses very little physical strength, but imparts the desirable properties of smoothness, bulk, opacity, and uniform formation for printing requirements. Some soda pulp is also made from coniferous woods.

Softwoods. – Coniferous trees, usually evergreen, having needles or scalelike leaves.

Standard Industrial Classification (SIC). – A system to define industries in accordance with the composition and structure of the economy, covering the entire field of economic activities. It is periodically revised to reflect the changing industrial composition of the economy. The latest revision was made in 1972.
Sulfate pulp. – A term commonly used for all grades of pulp cooked by the process in which the makeup chemical is essentially sodium sulfate. Originally, sulfate pulps were used for the most part in the manufacture of various grades of paper and paperboard where physical strength was of primary importance. However, increasing amounts of sulfate pulps are being used for absorbent tissues, wadding, and for chemical conversion grades. Although the stronger grades are made from softwoods, very large quantities of hardwood kraft pulps are produced.

Sulfite pulp. – A pulp usually manufactured from coniferous woods of low resin content, such as spruce, balsam-fir, and hemlock, by dissolution of the ligneous material (lignin) with calcium bisulphite cooking acid. Dolomite limes, containing a fair percentage of magnesium along with the calcium, are sometimes used when economical. Sulfite pulp is used either bleached or unbleached in nearly all classes of papers, and bleached sulfite pulp is used in the manufacture of rayon and cellulose esters and ethers.

Timber commodities. – Includes lumber, veneer, plywood, hardboard, insulation board, particleboard, medium-density fiberboard, woodpulp, and other commodities manufactured from timber products.

Timber products. – Includes (a) roundwood products such as sawlogs, veneer logs and bolts, cooperage logs and bolts, pulpwood, fuelwood, piling, poles, posts, hewn ties, mine timbers, and other round, split, or hewn products, and (b) byproducts of primary wood-manufacturing plants.

Timber products output. – The volume of timber products cut from growing stock on commercial forest land and from other sources such as cull trees, salvable dead trees, limbs, saplings, material less than 4 inches in diameter, timber on noncommercial and nonforest lands, and plant residues.

Unbleached pulp. – A chemical pulp altered by an oxidizing or reducing agent to a G.E. brightness less than 45.

Veneer log. – Roundwood logs used to produce veneer. Generally of higher quality than other roundwood logs. Also called peeler logs.

Wooden containers. – These include nailed and lock-corner wooden boxes and shuck; wirebound boxes made from lumber, veneer, and plywood; veneer and plywood containers, except boxes and crates, including pails, drums, tubs, fruit and vegetable baskets, and handpicks.

Woodpulp. – A pulp manufactured either by mechanical or chemical means or both from softwood or hardwood trees. Used as part or all of the fiber composition in practically every type of paper, and constitutes approximately 90 percent of the virgin pulp fiber used by the world’s paper and board industries.

### Table A.1.—Standard Industrial classification (SIC) system definitions of industries included in figures 71-91 and tables 36-40

<table>
<thead>
<tr>
<th>SIC NC</th>
<th>Industry</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>2431</td>
<td>Millwork</td>
<td>Establishments primarily engaged in manufacturing fabricated millwork. Planing mills primarily engaged in producing millwork are included in this industry, but planing mills primarily producing standard workings or patterns of lumber are classified in 2421. Establishments primarily manufacturing wood kitchen cabinets and bathroom vanities are classified in 2434.</td>
</tr>
<tr>
<td>2434</td>
<td>Wood kitchen cabinets</td>
<td>Establishments primarily engaged in manufacturing wood kitchen cabinets and wood bathroom vanities.</td>
</tr>
<tr>
<td>2439</td>
<td>Structural wood members, NEC</td>
<td>Establishments primarily engaged in producing laminated or fabricated trusses, arches, and other structural members of lumber. Establishments primarily engaged in fabrication on the site of construction are classified in Division C, Construction. Establishments primarily engaged in producing prefabricated wooden buildings, sections, and panels are classified in 2452.</td>
</tr>
<tr>
<td>2441</td>
<td>Nailed and lock corner wood boxes and shook</td>
<td>Establishments primarily engaged in manufacturing nailed and lock corner wood boxes (lumber or plywood), and which also may produce shook for nailed and lock corner boxes.</td>
</tr>
<tr>
<td>2448</td>
<td>Wood pallets and skids</td>
<td>Establishments primarily engaged in manufacturing wood and wood-metal combination pallets and skids.</td>
</tr>
<tr>
<td>2449</td>
<td>Wood containers, NEC</td>
<td>Establishments primarily engaged in manufacturing wood containers, NEC, classified, such as cooperage, wirebound boxes and crates, and other veneer and plywood containers. Establishments primarily engaged in manufacturing tobacco hogshead stock are classified in 2421, and those manufacturing cooperage stock in 2429.</td>
</tr>
<tr>
<td>2451</td>
<td>Mobile homes</td>
<td>Establishments primarily engaged in manufacturing mobile homes. These mobile homes are generally over 35 feet long, at least 8 feet wide, do not have facilities for storage of water or waste, and are equipped with wheels. The products may also have nonresidential uses, such as classrooms or offices. Trailers that are generally 35 feet long or less, 8 feet wide or less and with self-contained facilities are classified in 3792. Portable buildings not equipped with wheels are classified in 2452.</td>
</tr>
<tr>
<td>2452</td>
<td>Prefabricated wood buildings and components</td>
<td>Establishments primarily engaged in manufacturing prefabricated wood buildings, sections, and panels. Establishments primarily engaged in fabricating buildings on the site of construction are classified in Division C, Construction.</td>
</tr>
<tr>
<td>2499</td>
<td>Wood products, NEC</td>
<td>Establishments primarily engaged in turning and shaping wood, and manufacturing miscellaneous wood products, NEC, from rattan, reed, splint, straw, veneer, veneer strips, wicker, and willow. This industry also includes establishments manufacturing lasts and related products, cork products, hardboard, and wood or metal mirror and picture frames. Establishments primarily engaged in manufacturing pallets and skids in 2448.</td>
</tr>
<tr>
<td>2511</td>
<td>Wood household furniture, except upholstered</td>
<td>Establishments primarily engaged in manufacturing wood household furniture commonly used in dwellings. This industry also includes establishments manufacturing camp furniture. Establishments primarily engaged in manufacturing upholstered furniture are classified in 2512, and reed and rattan furniture in 2519; television, radio, phonograph, and sewing machine cabinets in 2517; and kitchen cabinets and bathroom vanities in 2434.</td>
